ACADEMIC PROJECT

Furniture Store Website

Description: This project involves the development of an e-commerce platform for a furniture store. The website allows users to browse various furniture categories, add products to their cart, and proceed to checkout. Built using PHP, the platform incorporates features such as an admin panel for managing products and orders. The system is designed with a user-friendly interface and secure payment processing to ensure a smooth shopping experience for customers. The project also includes a database for storing product information, user details, and

.history

RumQuest Booking System

Description: This project is a web-based booking system for adventure tours in Wadi Rum, developed using Laravel, a powerful: .PHP framework. The system allows users to explore available adventure packages such as jeep tours, camping, and hiking. Users can view available time slots, make bookings, and receive confirmation. The admin panel enables management of tours, .pricing, schedules, and customer bookings

The platform features a responsive and modern design, user authentication, and an efficient booking process to ensure a .smooth experience for both customers and administrators
