GitHub

Projects

Gadget Loop [↗](#)

Led the end-to-end development of an innovative eCommerce platform specializing in electronic gadgets and tech accessories. The project aimed to provide a seamless shopping experience for tech enthusiasts while ensuring robust backend management using these technologies :

HTML,Tailwind Css, JavaScript, React.js, Node.js, Postgress.

InklyReads [↗](#)

InklyReads brings book enthusiasts together, a platform crafted using HTML, CSS, and JavaScript. I've used Bootstrap for a user-friendly design. The diverse book collection is managed through a JSON server, and collaborative development is streamlined with Git and GitHub.

LifeBank

This is a website for blood donation, where donors and patients can communicate easily to make the process easier and faster. I worked on the front-end of the program,in used HTML , CSS and BOOTSTRAP to create the userinterface of the program. Also i worked on the Back-end of the program with my team to built the database of the program.
